

Metric Exec Reflects on One-Year CFO Appointment at Construction Innovations

Metric Exec, a global leading executive search firm, marks one year since the successful placement of Michael Anderson as Chief Financial Officer (CFO) at Construction Innovations.

Over the past year, Michael has taken on significant responsibility within the broader organization, expanding the scope of the CFO role to include increased commercial leadership alongside core financial oversight. He has played a key role in supporting strategic growth initiatives, strengthening financial governance, and partnering closely with the executive team on commercial decision-making as the company continues to scale.

"CFO appointments are most meaningful when they deliver sustained impact and evolve with the business," said Kirsty Beckwith, Consultant and Spokesperson at Metric Exec. "One year on, Michael's expanded remit reflects both his capability as a financial leader and the confidence placed in him by the wider organization."

Reflecting on the search process, Michael Anderson commented:

"Kirsty took a long-term, highly considered approach throughout the process. She provided thoughtful insight, thorough preparation, and a balanced perspective that helped me make the right decision — not just the easy one. She consistently focused on alignment between role, company, and long-term success. I would highly recommend her!"

The search was led by Kirsty Beckwith, who partnered closely with Construction Innovations' leadership team to identify a CFO with the technical depth, commercial acumen, and leadership capability required to support both immediate priorities and long-term objectives.

This milestone highlights Metric Exec's commitment to placing executives who drive durable, long-term success for their organizations.
